

HARNES SOLUTIONS

HARNES CHECKPOINT™

Harnes Checkpoint™ is an end-to-end solution providing real-time tracking & monitoring of vehicles at checkpoint locations. It integrates real-time tracking and alert monitoring into one powerful and easy-to-use solution. Urgent notifications pushed to the specific staff members who need them the most enables immediate corrective action.

Benefits

- Increased Turn Around Time (TAT)
- Increased plant safety compliance
- Lowered operating expenses
- Improved transporter management
- Improved supply chain efficiencies due to integrated real time information
- Improved ROI with fast immediate go to market implementation
- Predictable truck availability using Checkpoint & GPS integrated solution
- Stricter adherence to company policies

Features

- Manages traffic flow inside the plant
- Configurable sequencing of Checkpoints enables multiple TAT measurements along route
- Monitors the number of trucks on plant premises at any given time
- Monitors truck availability using Checkpoint & GPS integrated solution
- Broadcasts automated alerts for defined events
